**Description:**

Broilers have different feed requirements in terms of energy, proteins and minerals during different stages of their growth. It is important to adapt feed rations to these requirements for maximum production. Young broilers have a high protein requirement for the development of muscles, feathers, etc. As the broilers grow their energy requirements for the deposit of fat increase and their protein requirements decrease. DufaMix Broiler Grower has been formulated to complement corn and soybean meal based diets for optimal performance and to allow the bird to express its full meat yield potential. An anticoccidial and enzymes are included for improved feed conversion, digestion and the reduction of wet droppings.
